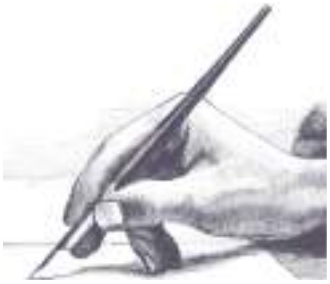
PREFACE



On the Editor Note…….the emerging knowledge'son society for the library and information science with wisdom are critical to the domains of decision making, problem solving as well as dealing with the consequences of our decisions.Theadvent of the information and communication technology is internet, there is a plenty of information deluge around us. Even those the overwhelmed information seekers are faced with a paradoxical situation of paucity in plenty. Library and Information Professionals role is expanding and they are required to bring delight on the face of information seekers by providing them with pertinent information in affordable and timely manner. Technological developments, though good in functional areas, are not a panacea to all our problems. Fundamental human problems will have to be solved at policy level and supported by pertinent researches and development initiatives. Discourse and communication are the only ways to develop strategic responses to the emerging problems.

NSTLTH-2023 is one such mechanism to take stock of the ICT based challenges and opportunities. It is matter of great satisfaction that there is a tremendous response to NSTLTH-2023. In all 55 Papers were received from all over India. Out of these, 25 papers have been selected for inclusion in pre-conference volume which is presented in the form of book entitled "Transition of Library from Traditional to Hybrid: Connecting, Communicating, and Co-operating". We are glad to know that a few opinion papers supporting our traditional values have also been included in this volume. That is a good effort to create a fair balance between the relic and harbingers of the library and information profession.We shall eagerly look forward to the learning outcome and valuable recommendations of this Seminar. We wish NSTLTH-2023 seminar and the delegate a great success.

The newer technological advancements warrant a newer approach in libraries and information centers. The integration of management principles into the library science, especially the e-pattern of service delivery along with customer relationship and information science. The changing roles of librarians, professional behavior, customer relationship and management ethics and values in the expanding technological era are some of the focus areas on which a number of papers have been contributed.

It was an eye opener for the editors they embarked on the mission of editing this proceeding. The dynamic research potential of many authors was self evident from the diversity of subjects they have covered and analyzed in their papers. It was thrilling journey through the labyrinth of information science, modern technology, the emerging technologies and technique and above all the opportunities and challenge these emerging technologies have thrown open. It was an absolute treat to watch the research acumen of certain papers which has thrown new light on the emerging technologies and their applications.

It is also comforting to see that the entire spectrum of themes outlined in the seminar objective wasadequatelycovered by the contributors.The information age has brought in a spectrum of changes. Amidst these changes, the noble flame of library remains constant. Libraries have been information lighthouses for centuries and will remain so for many more countries to come. The role of information personnel might change from time to time but the concept of service will remain constant eternally. All the contributions in this volume highlight the noble concept.

Libraries are not just buildings but they are metaphors and the symbols of people quest for knowledge. Through this volume we are happy to add one more dimension to the professional turn of library and information services.
